

Welcome to PAI Class

The smart, fast, and easy way to run your school.

Old school systems are just digital file cabinets

They store files, but they don't actually help.

Teachers waste hours on paperwork.

Students wait weeks for grades.

Admins get stuck fixing messy data by hand.

PAI Class is an active helper

Safe AI

Helps students 24/7
using only approved
class notes.

Fast Grading

AI reads and helps
teachers grade work
in seconds.

Easy Workflows

Everything is connected
automatically so nobody
has to wait.

The friction of the old way versus the speed of PAI Class

The Old Way

Type names and emails
one by one.

Call out names and mark
paper sheets.

Wait days for a teacher's
office hours.

PAI Class

Drag and drop a file; the AI
fixes any missing information.

Use a phone to quickly swipe
right or left.

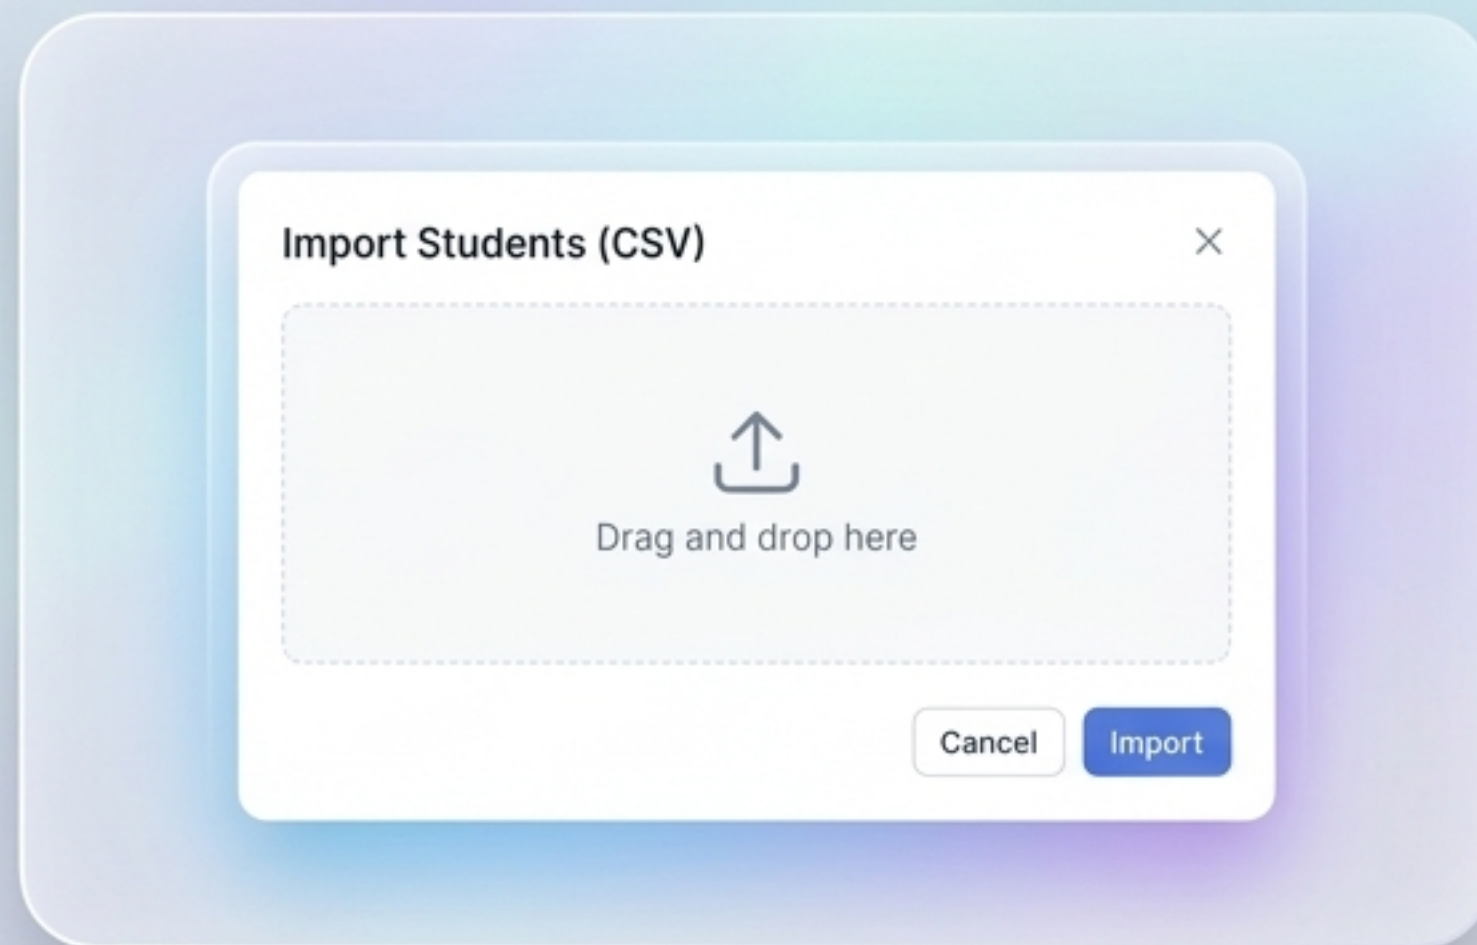

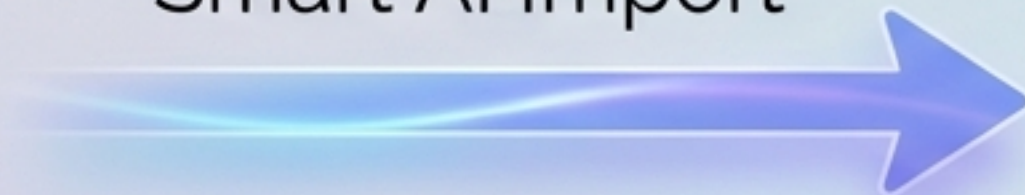

Ask the AI Tutor a question
anytime, day or night.

Adding thousands of students is completely automatic

Smart AI Import

Just drop your file into the system.

The smart AI reads the file and matches names and emails instantly.

If a student is missing a password, the system creates one for them. No manual typing needed.

Administrators get a clear, instant view of the entire campus

See exactly how many students are active and which classes are full on one screen.

Ask the “Executive AI” questions in simple English to find information fast.

Change one rule (like minimum attendance) and it updates the whole school instantly.

The dashboard features a top navigation bar with an "AI Assistant" search bar. The main content area is titled "Departments" with a subtitle "Manage university departments" and a "+ New Department" button. It displays a grid of department cards, each showing the department name, a brief description, and three statistics: active students (person icon), full classes (book icon), and another metric (group icon). The departments shown are ATSC, BA, CE, CS, EE, IT, ME, and SE. A sidebar on the right contains "System Settings" and "Attendance Rules".

Department	Description	Active Students	Full Classes	Other Metric
ATSC	ASTC is actually a training center and academic support for students and it would be the business...	37	1	1
BA	Department of Business Administration Management, finance, marketing and business analytics.	16	1	2
CE	Department of Civil Engineering Structural engineering, transportation and construction.	12	1	1
CS	Department of Computer Science Softwars engineering, AI, algorithms and computing scieices.	54	3	8
EE	Department of Electrical Engineering Power engineering, teleccomunications, electronics and control.	15	1	2
IT				
ME	Department of Mechanical Engineering Thermodynamics, CAD design, robotics and manufacturing.	15	1	2
SE	Department of Software Engineering Software architecture, quality assurance and enterprise systems.	19	1	3

Attendance Rules

Minimum Attendance (X)
70

Students below this percentage are flagged as at-risk and become eligible for automatic warning emails.

Teachers take daily attendance with a simple swipe

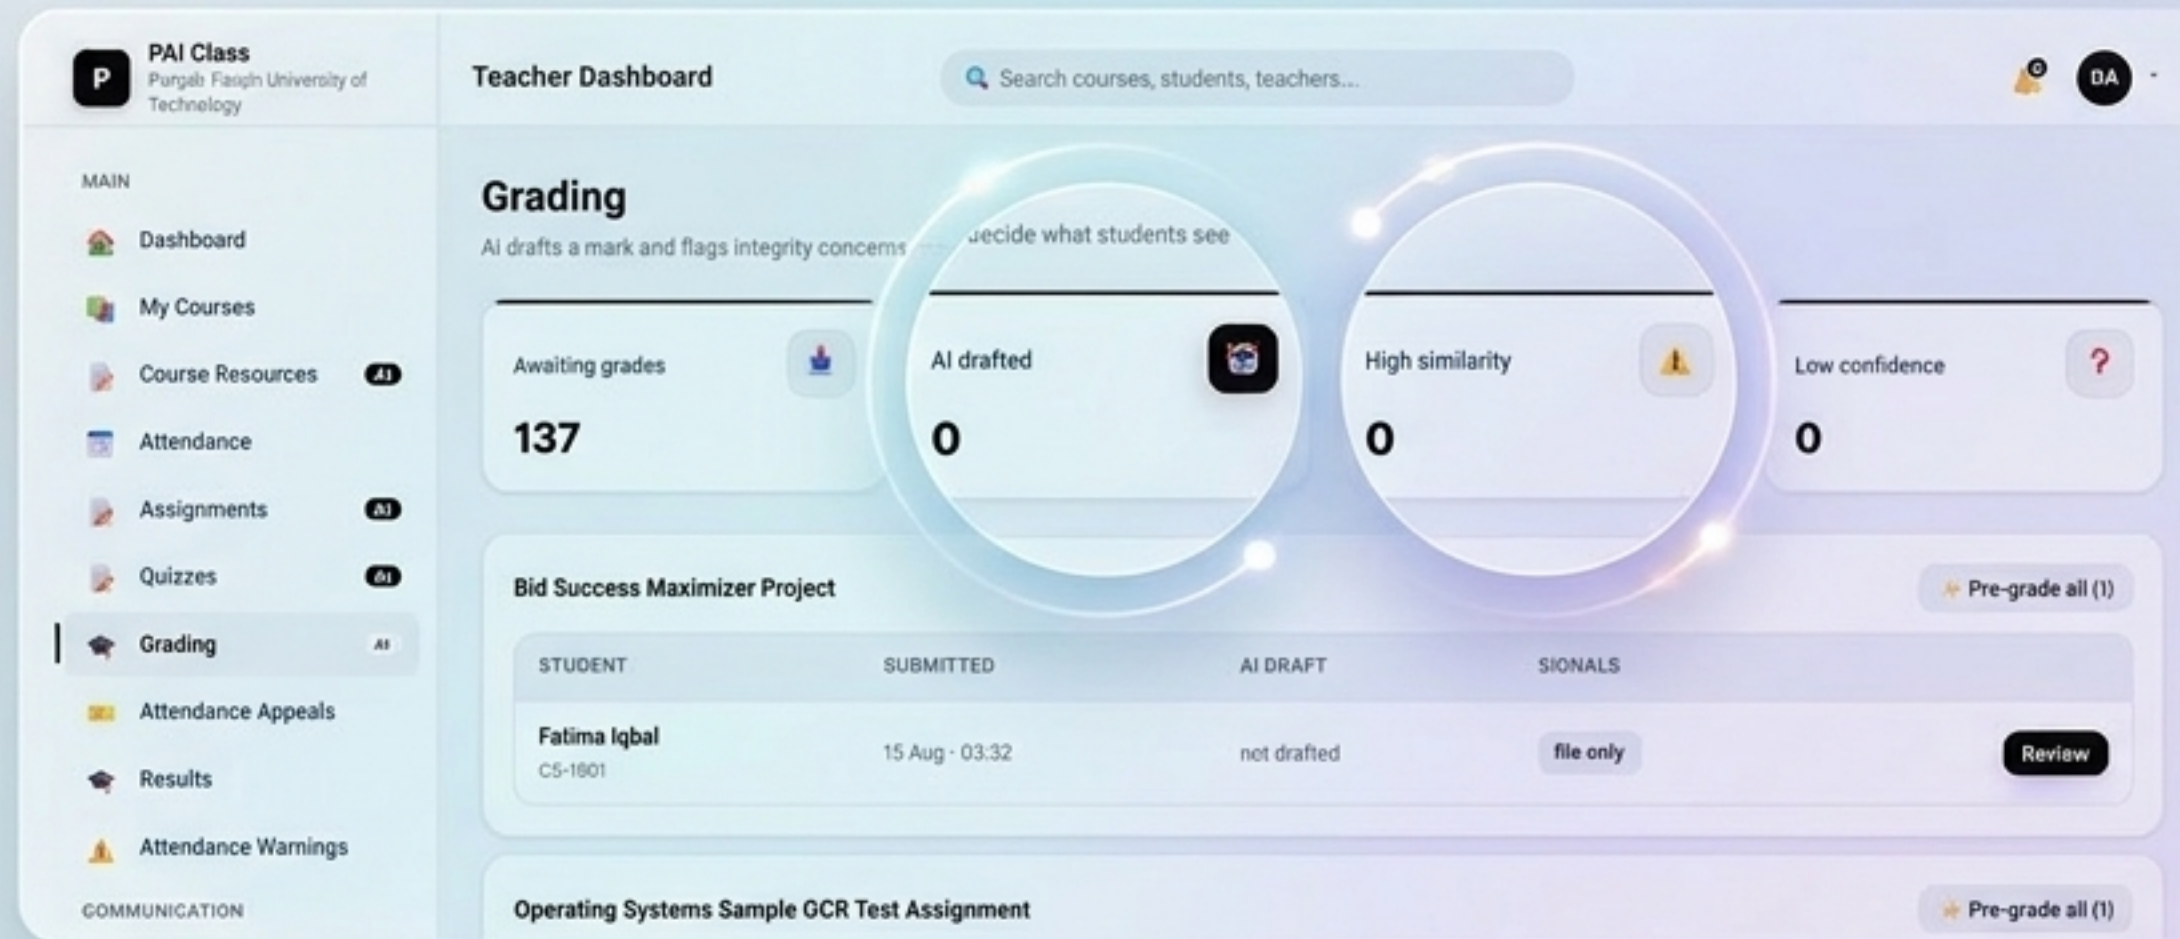

Teachers can use their phone or keyboard.

One quick swipe marks a student present or absent.

The system instantly does the math and warns students if they miss too many days.

AI automatically helps teachers grade homework faster

When students upload homework, the AI reads the text instantly.

It checks for cheating and suggests a draft score based on the rules.

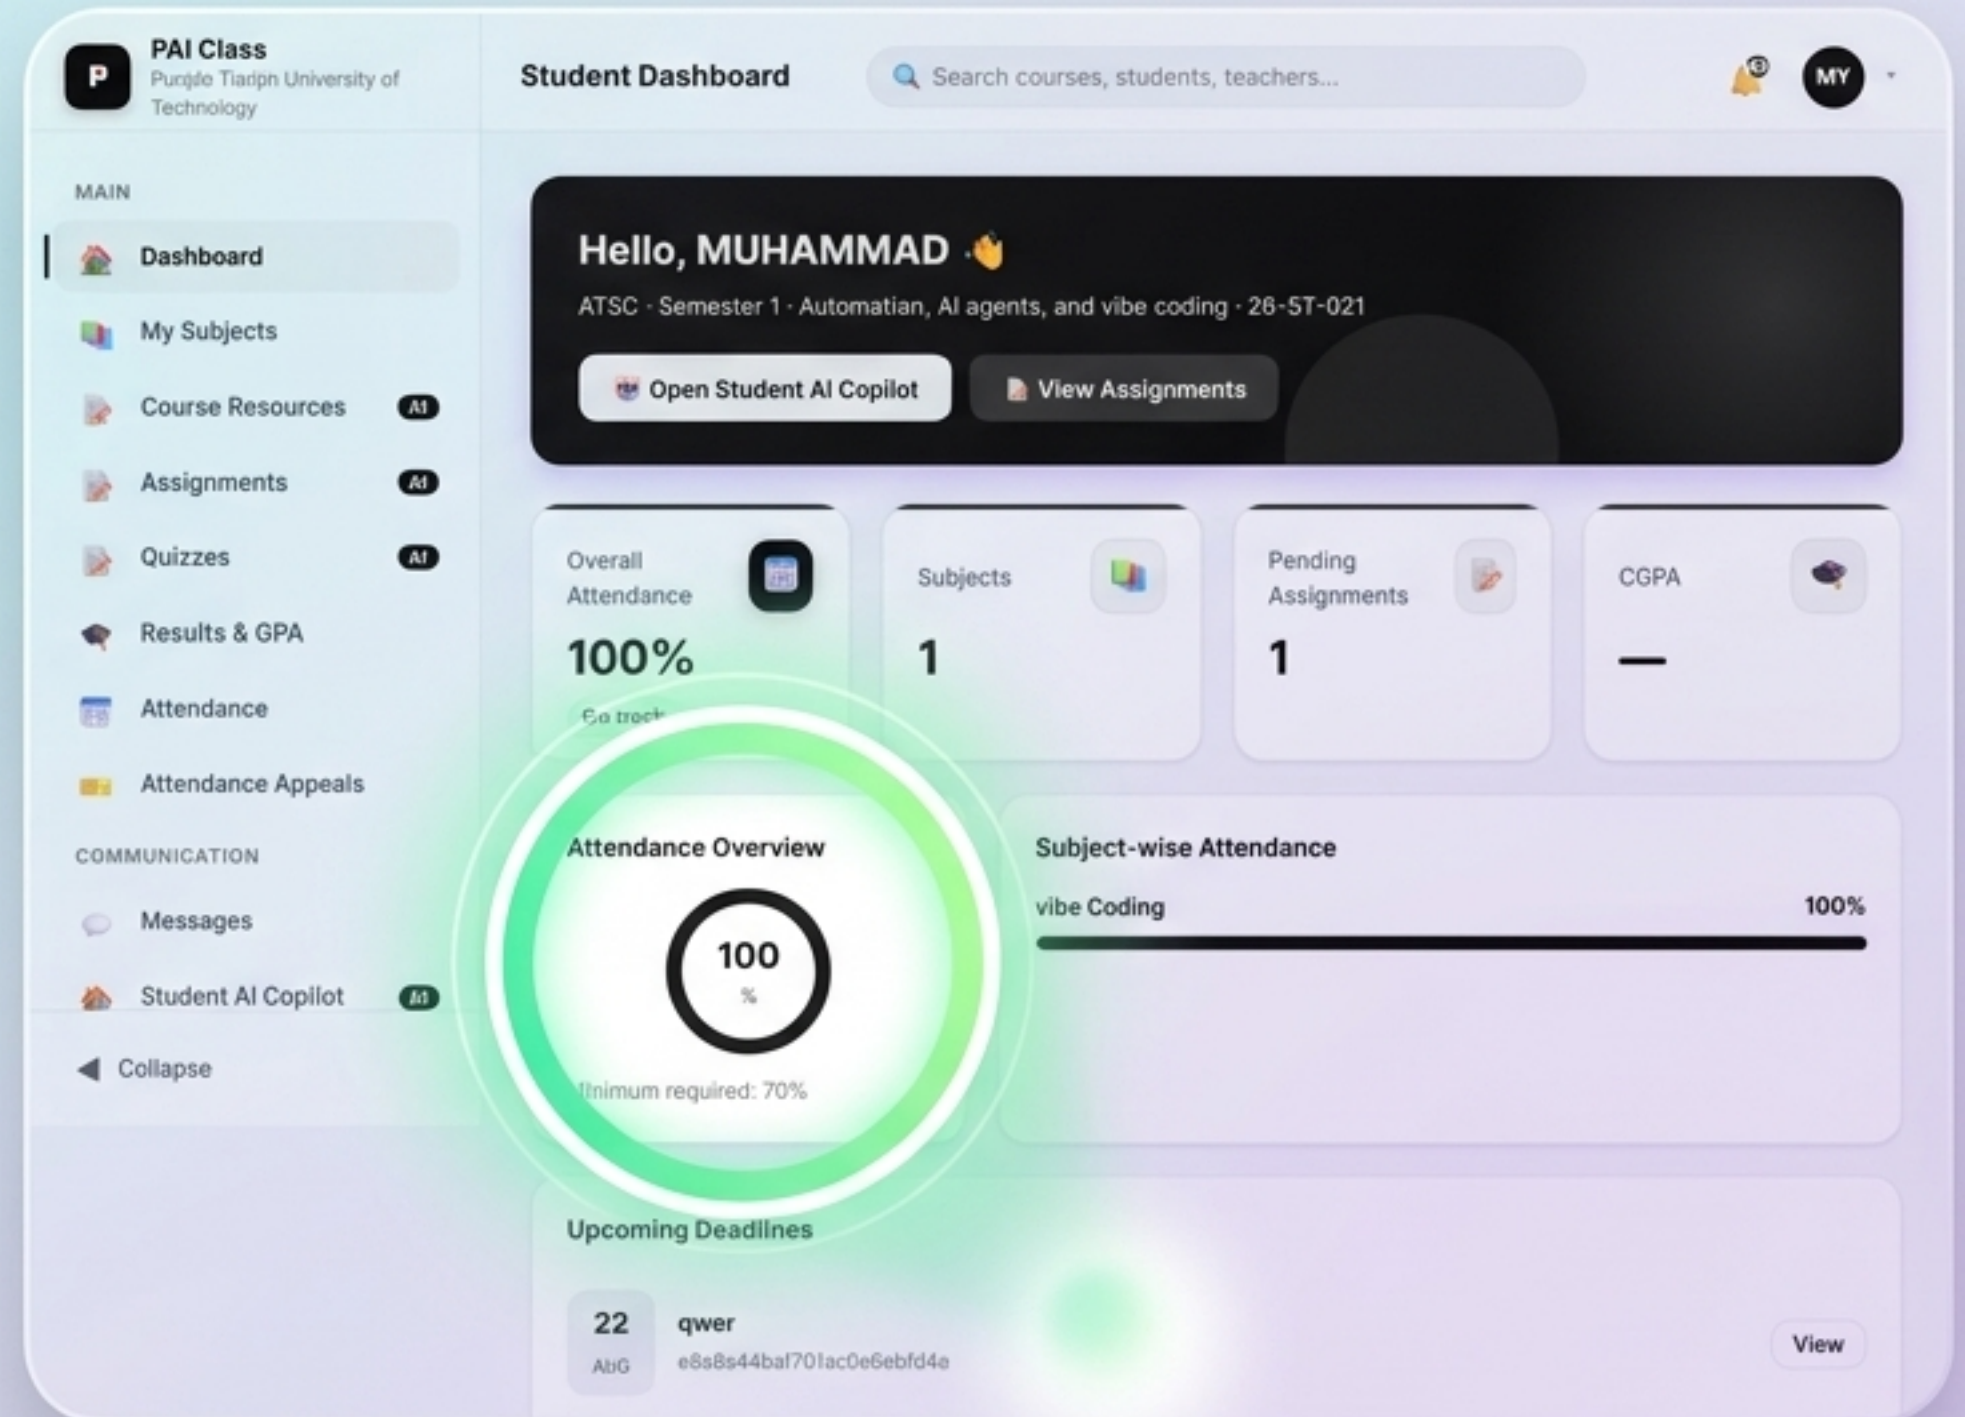

The teacher reviews the draft and always makes the final choice. The hard work is done for them.

Students always know exactly how they are doing

The dashboard puts attendance, grades, and upcoming homework on one screen.

No more searching through hidden menus or guessing what to do next.

Everything is updated the exact second a teacher clicks a button.

A 24/7 study partner that speaks your language

**PAI Class Student AI Copilot**
● Online — Scoped to your academic records

Hello MUHAMMAD! 🎓 I'm your Student AI Copilot. Ask me about your subjects, attendance status, assignment deadlines, published results, or class timetable.

What is my overall attendance percentage?

Show my upcoming assignment deadlines

What is my published GPA & results breakdown?

Ask your Student Copilot anything...

Send

Can you explain this homework topic?

کیا آپ اس ہوم ورک کے موضوع کی وضاحت کر سکتے ہیں؟

Students can ask the AI questions about their classes at any time.

The AI answers clearly in either English or Urdu.

It helps with understanding hard topics, tracking deadlines, and managing schedules.

Mistakes and absences are fixed without the normal stress

VC: 2008-06-14

Reason: I was present following absence mark

Proof upload: 2. Upload note

Notes on appeal

1. If a student is sick, they don't need to chase down the teacher in the hallway. They upload their doctor's note online.

2. The note instantly appears on the Teacher's screen.

3. The teacher clicks one button, and the mark is fixed automatically. No paper involved.

The system uses a strict 'fence' so the AI never makes things up

Step 1: Teacher Upload

Upload Course Resource

Select Course *

CS101 - Programming Fundamentals

Resource Title *

e.g. Lecture 1: Data Structures Overview

Resource Type *

PDF Document

Upload File (PDF, DOCX, T&T, Slides, Images)

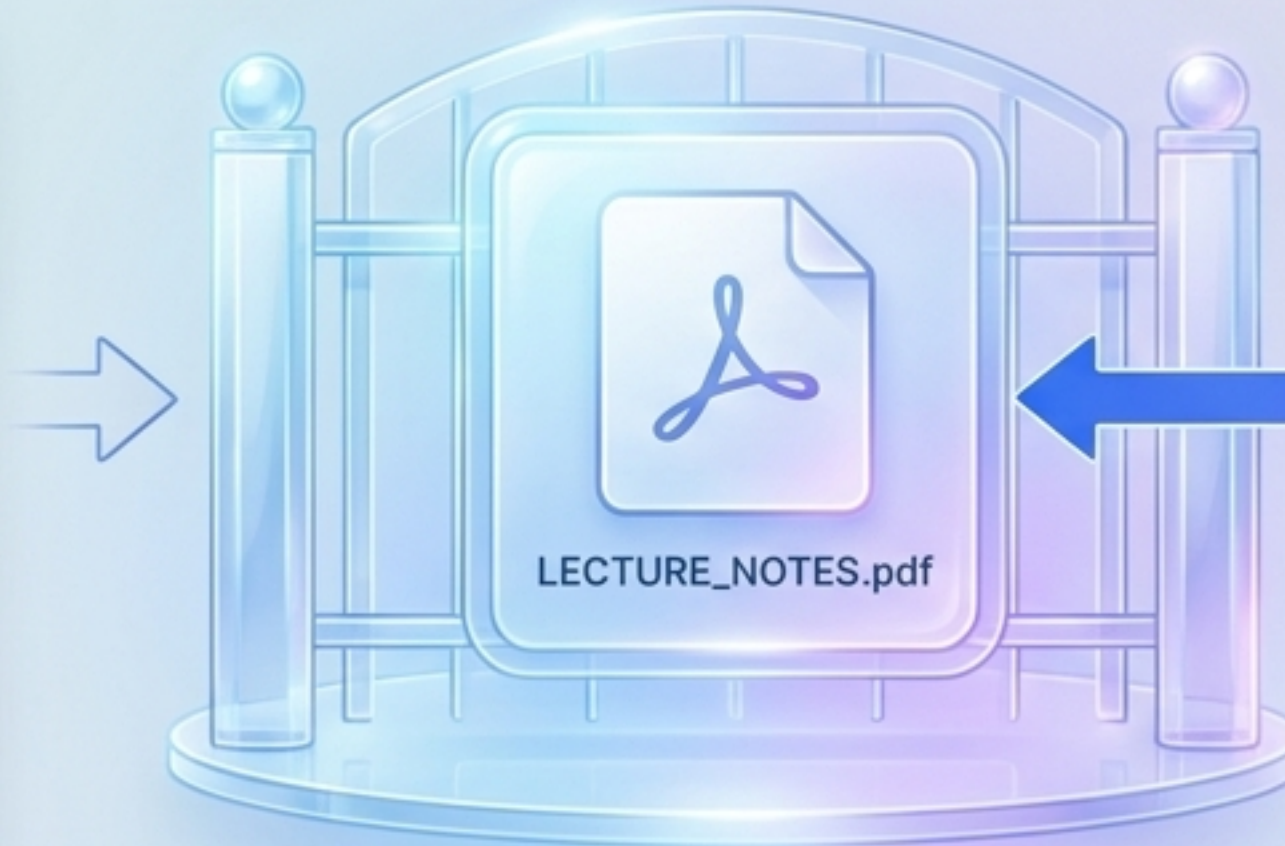

Choose File

No file chosen

File will be automatically converted & indexed into AI MAG Vector DB.

Teacher

Step 3: AI Response

Based on the lecture notes, binary trees are...

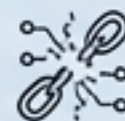

AI

Student

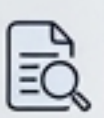

Most AI reads the whole internet, which causes mistakes and fake answers.

PAI Class is different. The AI is strictly locked **inside a fence.**

It can only read the exact slides and notes the teacher uploaded. If it's not in the notes, the AI won't say it.

Custom software built specifically for speed and zero clutter

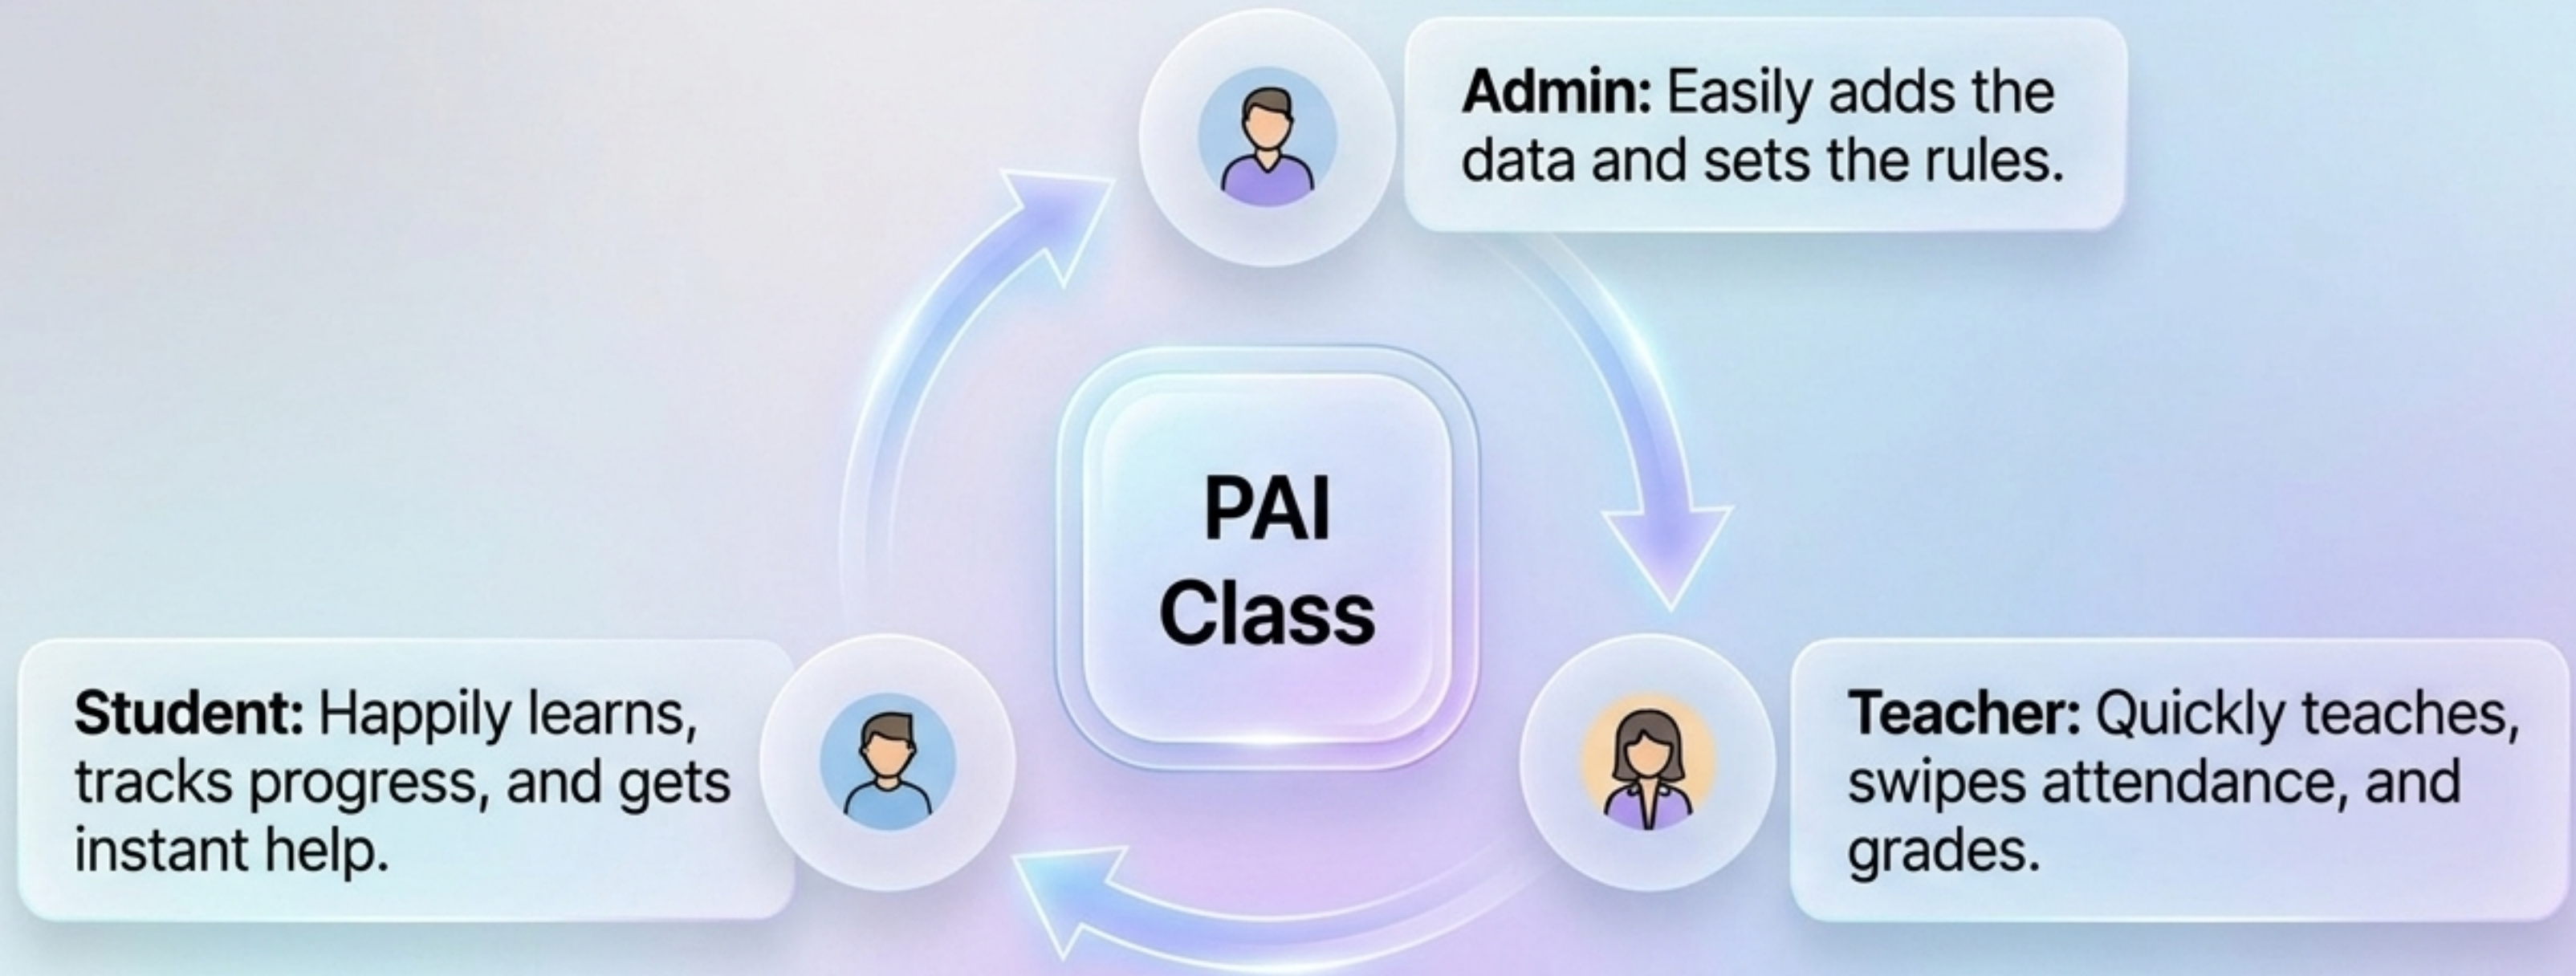

PAI Class is built with lightweight code, ignoring heavy, slow web tools.

When you click a button, the screen changes instantly without reloading.

It operates smoothly even when thousands of people use it at the same time.

A fully connected campus where everyone works together

No lost paperwork. No waiting. No stress.

Education without the friction.

Ready to make your school smarter,
faster, and easier to run?
